at Huddersfield
Town FC

Safety, diligence and professionalism are at the heart of everything we do.

Founded in 1993, Scaffolding Access Solutions Ltd provide support for projects throughout the UK, across the industrial, commercial, private and public sector industries.

Through our extensive experience we have a comprehensive understanding of the challenges that arise within differing working situations, from small access towers and heritage listed buildings, to major construction works on COMAH top tier sites.

Incorporating our design and calculation facility, we provide tube, fitting and system scaffolding solutions for a wide range of projects, including:

- > **Temporary roofs and staircases**
- > **Facade retention & shoring**
- > **Weather protection**
- > **Demolition**
- > **Load bearing platforms**
- > **Confined space working**

We are experienced and qualified to work on sites which handle:

- > **Chemical processing**
- > **Water treatment**
- > **Food and drink manufacturing**

Why choose Scaffolding Access Solutions...

- > **You receive outstanding project management from an experienced supplier**
- > **We are members of NASC (National Access and Scaffolding Confederation) - ensuring our work is to the highest industry standards and meets current legislation covering best practice and safety**
- > **Our passion to deliver the very best service to our customer, is radiated throughout the business, from the top down.**

Wesley Johnson
Managing Director

Our commitment to best practice

As members of NASC, the trade body for access and scaffolding in the UK, we are strictly audited to ensure the highest possible industry standards are met,

It's these high standards that are recognised by construction industry leaders, who continue to stipulate NASC only companies for access and scaffolding. NASC members must ensure that:

- > **Operatives are fully trained and all work is carried out in accordance with the relevant codes of practice, by registered scaffolders who are adequately supervised**
- > **Health and Safety regulations are complied with**
- > **Public and Employer's Liability Insurance cover is guaranteed**
- > **All materials used conform to the highest standards, are regularly inspected and maintained**

HAKI tower systems training

In addition, we adhere to our own stringent standards and are heavily committed to providing ongoing training and resource in line with our client's needs and expectations.

- > **CHAS approved (Contractors Health and Safety Assessment Scheme)**
- > **Scaffold operatives are fully carded on the CISRS (Construction Industry Scaffolders Record Scheme)**

Case Study

Salts Mill, Saltaire

Project Overview: scaffold access to facilitate removal and replacement of roof tiles. The historic building, part of a UNESCO World Heritage Site, is a place for art, dining and shopping and houses over 1000 people within a range of businesses.

Testimonial: "There is a high number of visitors to the Mill, however Scaffolding Access Solutions endeavoured to ensure work was carried out safely with little disruption to the public. During this project the team had to overcome some challenging obstacles including the Leeds-Liverpool canal being directly below the working area. Also, restricted access to certain parts of the building meant scaffold had to be gently guided through internal window openings. Throughout the project, scaffolders on site were punctual, professional and respectful to staff and public alike".

Steve Derham, Watershed Roofing Ltd

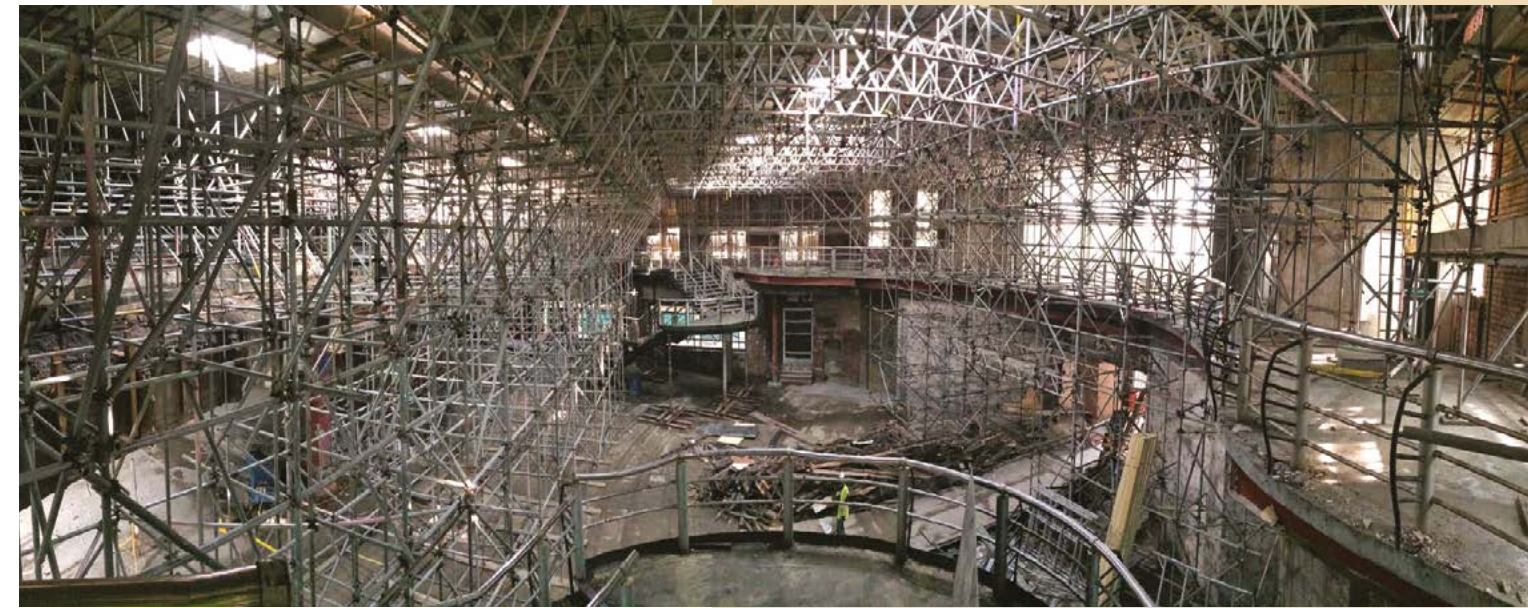

Case Study

BASF, Bradford and Grimsby

Projects Overview: both BASF sites manufacture chemical products used in various industrial processing applications and as such, working within these COMAH (Control of Major Accident Hazards) regulated environments requires the highest levels of safety.

At the Bradford site we supported our group company, Richard Alan, on a new plant installation and contributed to a significant safety milestone of 100,000 man-hours without a single Lost Time Accident (LTA) during work on the project.

Our scope of work included the erection of access towers and lifting frames, which involved challenging confined space working around existing plant.

Case Study

The Majestic, Leeds

Project Overview: this iconic Grade II listed building in the heart of Leeds city centre, was badly damaged after fire ravaged it in 2014, leaving an unstable shell with no roof. Over 2 years the building was made watertight with a temporary roof and dried out with ventilation ducting. Scaffolding Access Solutions erected and maintained the vast and complex access and load bearing platforms within the multi-level site.
